ASX Announcement

DXN Limited executes contract with Business Communications Australasia for colocation services at DXN-SYD01

Highlights

- DXN has executed an agreement with BCA on a three-year contract worth A\$260K
- BCA will move all existing clients to DXN-SYD01 and on-sell colocation and IT services from the Sydney data centre
- DXN's fully segregated environment provides an extra layer of physical security not available from traditional colocation data centres

Pre-fabricated modular data centre specialist, [DXN Limited](#) (ASX:DXN), is pleased to announce it has signed a A\$260K agreement with [Business Communications Australasia](#) (BCA) for the provision of colocation data centre services at the [DXN-SYD01](#) Sydney data centre.

Matthew Madden, CEO, DXN Limited said that BCA will take up rack space in [DXN-SYD01](#) for an initial term of three years.

"We are delighted to welcome BCA to DXN as they are an excellent example of the kind of partner that is a perfect fit for the DXN model; IT companies that are looking to utilise our state-of-the-art facility and on-sell that excellence to their customers."

BCA Managing Director, Andrew Bates said, "We've chosen DXN as our data centre partner because DXN fits perfectly with our business plan and offers a unique way of delivering IT services for our customers.

We intend to move all existing clients to the facility and will on-sell colocation racks and provide IT services out of the facility for all future clients.

We really like that DXN was able to offer a fully segregated environment that only we could access. It gives us that extra layer of physical security that you wouldn't get from a traditional data centre."

Madden said, "BCA has effectively purchased a 'data centre in a data centre'. Providing top-level reliability, DXN-SYD01 offers support for a wide range of cloud and IT service providers."

Modular data centres such as DXN-SYD01 are a potential strategy to "future proof" the industry, increasing installation and management efficiencies of data centre hardware infrastructure – enabling businesses to respond to sudden technology changes and market demand opportunities.
