Australian independent test confirms Aeris Active is effective against Corona Virus in 60 seconds

Aeris Environmental Ltd (Aeris or the Company) has been notified by Eurofins AMS Laboratories, a provider of world-class analytical and consulting services in microbiology, that **Aeris Active has achieved over 4log kill (99.99%) after just 60 second contact time** (which provides rapid deactivation of this virus) against Murine hepatitis virus ATCC® VR-261™, a member of the Coronavirus family that has been used as a surrogate for Coronavirus in published disinfectant studies.

The Company is experiencing unprecedented demand from multiple local and global customers, distributors and governments, and across several industrial, commercial, food service and consumer markets. This demand covers several of Aeris' proprietary products, including hard surface disinfectants with residual properties, skin sanitisers, air-conditioning protection, and a range of environmental hygiene cleaners and treatments.

The Company is scaling up supply, with multiple manufacturing sites now in production. Capacity is now coming online in the United States, China and SE Asia.

Aeris Active contains a proprietary 'dual active' biocide system, providing broad spectrum viricidal, bactericidal and fungicidal efficacy together with proprietary 'residual protection' affording, in addition to the initial kill, long-term (200 touch or seven day) protection of at-risk surfaces. The product is environmentally friendly, safe to use, and compatible with the broadest spectrum of at-risk surfaces, including hard surfaces, polymers, metals, glass, soft furnishings, and natural and man-made materials.

About Aeris Environmental Ltd

Aeris develops, manufactures and markets proprietary, environmentally-friendly technology that drives measurable improvements in asset performance and sustainability. The Company's whole-of-system approach ensures that systems perform better, are safer, last longer and cost less to run.

Aeris' products solve real world problems more effectively than conventional toxic chemicals. Uniquely based on validated, green formulations, the Company's enzymes and treatments with residual protection provide long-term remediation, and prevention of mould, bacteria growth, corrosion and improved hygiene.

AerisVIEW, the Company's cloud-based visualisation network, is uniquely scalable across all climate-controlled environments, including buildings of all sizes, and vehicles. Aeris' solution delivers dramatic and proven energy savings, alongside documented benefits to system efficiency, and independently-validated indoor air quality with proven immediate improvements in sustainability and cash flow savings.
