Chalice to earn-in to Venture's South West Project to test for Julimar style mineralisation

Chalice Gold Mines (ASX:CHN) who recently discovered the new exciting Julimar Ni-Cu-PGE discovery in a new province near Perth, Western Australia has committed to spend up to \$3.7M to earn 70% in Venture's South West Project located south of Perth;

Chalice to advance previous exploration completed by Venture to test for Nickel-Copper-PGE sulfides in potential ultramafic-mafic intrusive complexes sitting under cover within the South West Project;

South West Project (including the Thor and Odin prospects) has previously displayed Ni-Cu-PGE potential with;

- Thor having a 20km long magnetic anomaly associated with chromium rich rocks indicative of mafic-ultramafic intrusions with potential to host Julimar type mineralisation;
- Recent EM survey having identified 13 targets in the southern 6km of the Thor magnetic anomaly;
- Maiden Drill Program at Thor intersecting 2.4m of Massive Sulfide averaging 0.5% Cu with 0.05% Ni, 0.04% Co and anomalous Au & Pd (refer ASX announcement 21 February 2019);
- Maiden Drill Hole at Odin intersecting Ni and Cu sulfides within a highly prospective mafic-ultramafic unit that extends over 10 strike kilometres (refer ASX announcement 11 May 2018).

Venture is looking forward to working with Chalice as it unlocks the Ni-Cu-PGE prospectivity of the South West Project.

Venture's Managing Director commented "The Company looks forward to seeing Chalice use its Nickel-Copper-PGE exploration expertise at the South West Project which sits in the same geological terrane to that of the Julimar discovery. This gives Venture shareholders the best opportunity of bringing forward any potential Julimar 'look-a-like' discovery within the Project."

Venture Minerals Limited (**ASX code: VMS**) (“Venture” or the “Company”) is pleased to announce that Chalice Gold Mines Ltd (**ASX code: CHN**) (“Chalice”) has signed a Binding Terms Sheet with Venture to earn-in to the South West Project (“Project”). Chalice, with its recent exciting Julimar Ni-Cu-PGE discovery in a new province near Perth, is well positioned to unlock the clear Ni-Cu-PGE potential of Venture’s South West Project.

The South West Project (256 km²) is located 240 km south of Perth hosted within the Balingup Gneiss Complex (see Figures 2 & 3). The two main prospects within the Project are Thor and Odin and both contain areas of potential Ni-Cu-PGE prospectivity.

Thor is a 20km long magnetic anomaly (see Figure 4) associated with chromium rich rocks indicative of mafic-ultramafic intrusions. A recent airborne electromagnetic (EM) survey identified 13 highly conductive anomalies within the southern 6km of the magnetic anomaly, of which only two have been drill tested in the maiden drill program (see Figures 5 & 6). The last hole drilled at Thor (TOR05) intersected 2.4m of Massive Sulfide averaging 0.5% Copper with 0.05% Nickel, 0.04% Cobalt and anomalous gold & palladium (see Figure 1).

At Odin, in the only hole drilled, Nickel and Copper sulfides were intersected within a highly prospective mafic-ultramafic unit that extends over 10 strike kilometres. This was further supported by surface sampling returning significant nickel and copper geochemical anomalies (see Figure 7).

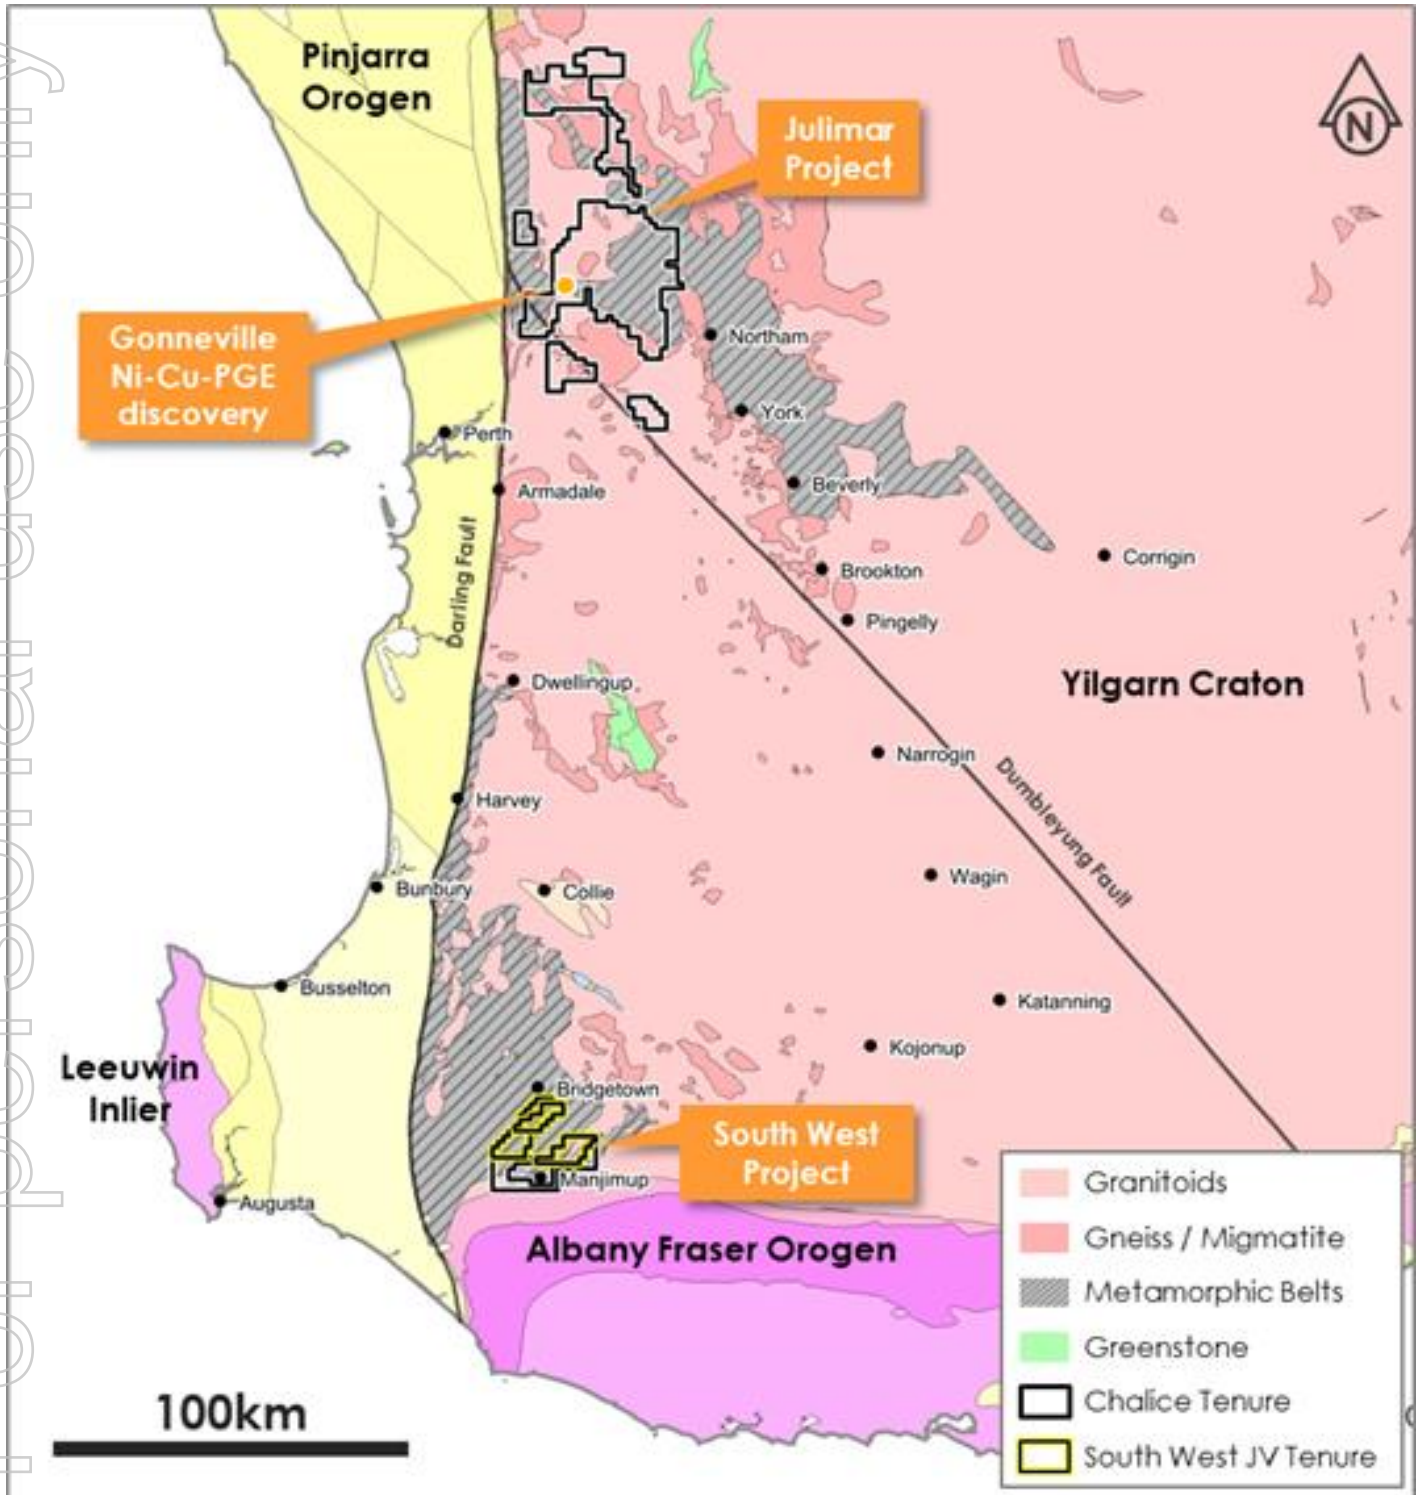

Under the option and earn-in agreement, Chalice may earn:

- A 51% JV interest in the Project by spending \$1.2 million on exploration within two years, including a minimum of \$300,000 in the first year.
- A 70% JV interest in the Project by spending a further \$2.5 million on exploration over the following two years.
- Venture can then elect to either contribute 30% or dilute to a minimum of 10% JV interest, in which case the interest automatically reverts to a 1.25% NSR royalty.
- Venture to have a historical expenditure of \$1.6M applied against the earn-in.
- Chalice may withdraw at any time after meeting the minimum expenditure commitment. All other terms are consistent with an industry standard joint venture arrangement. The transaction is conditional upon normal due diligence in relation to legal and title.

Yours sincerely

Andrew Radonjic
Managing Director

The information in this report that relates to Exploration Results and Exploration Targets is based on information compiled by Mr Andrew Radonjic, a fulltime employee of the company and who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Andrew Radonjic has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Andrew Radonjic consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
