This condensed consolidated interim financial report does not include all of the information required for a full annual financial report, and should be read in conjunction with the consolidated 2019 Annual Report and any public announcements made by the Company during the interim reporting period.

This condensed consolidated interim financial report was approved by the Board of Directors on 12 August 2020.

3. Significant accounting policies

The accounting policies applied by the Group in the condensed consolidated interim financial report are consistent with those applied by the Group in its consolidated financial report as at and for the year ended 31 December 2019.

4. Estimates

Actual results may differ from these estimates.

Bell Financial Group Limited Notes to the Condensed Interim Financial Statements (continued) For the half-year ended 30 June 2020

4. Estimates continued

Impairment of goodwill

Goodwill is tested for impairment annually or more frequently if events or changes in circumstances indicate that it might be impaired. For the purpose of impairment testing, goodwill is allocated to the Retail and Wholesale segment which represents the lowest level at which it is monitored for internal management purposes.

The recoverable amount of the business to which each goodwill component is allocated to a cash-generating unit is estimated based on its value in use and is determined by discounting the future cash flows generated from continuing use. At 30 June 2020, goodwill allocated to the cash-generating units was \$57.5 million for Retail and \$72.9 million for the Wholesale segment.

There were no indicators of impairment for the half-year ended 30 June 2020.

5. Financial risk management

All aspects of the Group's financial risk management objectives and policies are consistent with that disclosed in the consolidated financial report as at and for the year ended 31 December 2019.

At the date of issue of this interim financial report, the impact of COVID-19 on Bell Financial Group has not been material. The future impact on global and domestic economies and investment market indicies is uncertain and Bell Financial Group continues to monitor this situation.

6. Determination of fair value

A number of the Group's accounting policies and disclosures require the determination of fair value, for both financial and non-financial assets and liabilities. Fair values have been determined and disclosed based on the following methods. Where applicable, further information about the assumptions made in determining fair values is disclosed in the notes specific to that asset or liability.

Investments in equity

The fair values of financial assets at fair value through profit or loss are determined with reference to the quoted bid price, or if unquoted determined using a valuation model at reporting date.

Derivatives

The fair value of interest rate swaps is based on a mark-to-market model with reference to prevailing fixed and floating interest rates. These quotes are tested for reasonableness by discounting estimated future cash flows based on term to maturity of each contract and using market interest rates for a similar instrument at the measurement date.

The fair value of currency swaps is determined using quoted forward exchange rates at the reporting date and present value calculations based on high quality yield curves in the respective currencies.

Share based payments

The fair value of employee stock options is determined using a Black Scholes model. Measurement inputs include share price, exercise price, volatility, weighted average expected life of the instrument, expected dividends and risk free interest rate. Service and nonmarket conditions are not taken into account in determining fair value.

Financial assets and loans at fair value through profit or loss

The fair value of options is determined using the Black Scholes option-pricing model.

Determination of fair value for loans is based on the option value used to mitigate the risk on the limited recourse margin loans and the interest rate implicit in the loan.

7. Segment Reporting

b. Accounting classifications and fair values

The following shows the valuation techniques used in measuring level 1, 2 and 3 values, as well as the significant unobservable inputs used.

Level 1 - Equity securities - the valuation is based on quoted prices in active markets for identical assets and liabilities.

Level 2 - Unlisted options - the valuation technique uses observable inputs. The observable inputs include strike price, expiry date and market price. The valuation is based on Black Scholes model.

Level 2 - Interest rate swaps - the fair values are based on broker quotes. Similar contracts are traded in an active market and the quotes reflect the actual transactions in similar instruments.

Level 2 - Currency swaps - the fair value is determined using quoted forward exchange rates at the reporting date and present value calculations based on high quality yield curves in the respective currencies.

Level 3 - Loans and advances - the fair value is based on the option value used to mitigate the risk on the limited recourse margin loans and the interest rate implicit in the loan.
