REVIEW OF OPERATIONS AND ACTIVITIES

The Consolidated Entity recorded an operating loss after income tax for the Financial Period ended 31 December 2020 of \$1,194,584 (2019 half year loss of \$514,841).

Ardea is a mineral exploration and development Company, focussed on development of its globally significant Kalgoorlie Nickel Project, commencing with the Goongarrie Nickel Cobalt Project. and nickel sulphide and gold exploration over its extensive Kalgoorlie Nickel Project tenement portfolio (>4,000km²) in the Eastern Goldfields mineral province of Western Australia.

Ardea's strategy for ultimate growth is to combine the following elements:

- Commercial nickel-cobalt-scandium production from the Kalgoorlie Nickel Project (KNP), commencing with the Goongarrie Nickel Cobalt Project (GNCP)
- Explore the broader KNP for Critical Minerals, nickel sulphide, and gold based on the legacy data base (>1,000,000 historic assays)
- Maximise the commercial value of the existing WA tenement portfolio through the ongoing exploration and if required establishment and operation of suitable joint ventures and value adding project divestment
- Ongoing commitment to the identification and review of projects/corporate opportunities that have the capacity to create value for Ardea Shareholders and executing on these opportunities

Ardea's major development projects are:

1. GNCP as a subset of the KNP
2. Bardoc Tectonic Zone (BTZ) and other Critical Mineral, Nickel Sulphide and Gold Projects

Goongarrie Nickel Cobalt Project (100% Ardea)

GNCP and KNP resource update completed February 2021, with key highlights including:

DIRECTORS' REPORT

Expansion Study completed July 2018, expanding the 1.5Mtpa base case to a 2.25Mtpa scoping-level assessment, predicated on rheology test work that confirmed considerably improved pulp densities for feeding into the autoclave reaction vessel. The current development base case is 2Mtpa with feasibility work streams continuing. The Expansion Study highlighted a strong case for an expanded throughput to 2.25Mtpa:

** refer PFS Announcement released to ASX on 28 March 2018, Expansion Study released 24 July 2018.

Key characteristics of the Goongarrie Nickel Cobalt Project (GNCP) include:

- **Ability to produce ethical and sustainable mineral supply** – all project designs are predicated on minimising the environmental footprint and carbon emissions. This is at the forefront of the way Ardea operates.
- **Metallurgically uncomplicated flowsheet** – refined in bench-scale and continuous piloting, focussing on premium goethite ore with significantly shorter pressure vessel residence time and low acid consumption, compared to other competitor nickel laterite ore types. The ore doesn't require beneficiation to achieve feed grades, so eliminating a processing step which caused materials handling problems for previous WA nickel laterite operations.
- **Significant by-product Critical Minerals credit potential** – notably scandium and manganese with opportunities to recover alumina and vanadium being assessed, along with R&D work continuing on a potential Rare Earth Element (REE) by-product.
- **On-site Neutraliser** – bench scale testwork and GNCP pit optimisation results have confirmed that nickel-enriched neutraliser material can be sourced during the normal course of mining and stockpiled for use as HPAL autoclave neutraliser. Sourcing of neutraliser onsite is expected to result in improved outcomes for the project by eliminating the need to import either externally sourced neutraliser material and/or commercial grade carbonate product. This will largely remove the need for importing limestone to site from a location approximately 450km away.
- **Excellent location with established infrastructure** – the Goongarrie project area is located 70km north of the mining hub of Kalgoorlie-Boulder with its high-skill workforce and includes sealed main road, rail, power, mobile phone coverage and gas pipeline infrastructure. The Port of Esperance is 480km by rail to the south and has established nickel processing feedstock and concentrate handling facilities.
- **Benign environmental setting** – the arid climate facilitates evaporation of tailings (so avoiding the submarine tailings disposal of some tropical nickel laterites), that are planned to be stored in exhausted open pits that will be dressed with top soil and revegetated. With long-established rehabilitation protocols developed from previous Eastern Goldfields nickel laterite mining operations, we know that the area rehabilitates well.
- **All resources located on granted mining leases** – certainty of current and future resource availability.
- **Heritage Agreement executed with GNCP Native Title claimant group** – provides better certainty of access for DFS site programs.
- **High Grade Resource** - The Company is targeting leach feed grades to a 2Mtpa HPAL plant at Goongarrie exceeding 1% nickel for 25 years. With the recent resource update (ASX release 15 February 2021) defining 60Mt at 1.0% Ni and 0.07% Co this target can be achieved. Additional high grade ore feed is being defined at projects within easy truck hauling distance of a central process plant located at Goongarrie. These include Highway and Siberia North with resource work underway. Ardea is in a unique position of having this resource optionality.
- **Stakeholder Engagement** – Ardea maintains an Operations Office in West Kalgoorlie and Corporate Office in West Perth and continues to work with the stakeholders within the communities in which it operates and is grateful for the strong Local Government and Community support received.

WA Nickel Sulphide, Critical Mineral and Gold (100% Ardea)

Ardea controls an extensive and highly prospective tenement portfolio which covers over 4,000km² in the Eastern Goldfields world-class nickel-gold province. Mineral discovery via exploration provides Ardea with the opportunity to add additional Company value that can complement development of its nickel-cobalt-scandium resource. Priority is placed on nickel sulphide exploration as any discovery has the potential to be processed through the HPAL autoclave planned for Ardea's GNCP, as it has the added benefit of helping control autoclave oxidising potential and typically improving recoveries. Compelling targets have been defined and ranked for follow-up exploration with active programs underway.
