This document contains certain forward-looking statements, relating to Starpharma’s business, which can be identified by the use of forward-looking terminology such as “promising”, “plans”, “anticipated”, “will”, “project”, “believe”, “forecast”, “expected”, “estimated”, “targeting”, “aiming”, “set to”, “potential”, “seeking to”, “goal”, “could provide”, “intends”, “is being developed”, “could be”, “on track”, or similar expressions, or by express or implied discussions regarding potential filings or marketing approvals, or potential future sales of product candidates. Such forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause actual results to be materially different from any future results, performance or achievements expressed or implied by such statements. There can be no assurance that any existing or future regulatory filings will satisfy the FDA’s and other health authorities’ requirements regarding any one or more product candidates nor can there be any assurance that such product candidates will be approved by any health authorities for sale in any market or that they will reach any particular level of sales. In particular, management’s expectations regarding the approval and commercialization of the product candidates could be affected by, among other things, unexpected clinical trial results, including additional analysis of existing clinical data, and new clinical data; unexpected regulatory actions or delays, or government regulation generally; our ability to obtain or maintain patent or other proprietary intellectual property protection; competition in general; government, industry, and general public pricing pressures; and additional factors that involve significant risks and uncertainties about our products, product candidates, financial results and business prospects. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described herein as anticipated, believed, estimated or expected. Starpharma is providing this information as of the date of this presentation and does not assume any obligation to update any forward-looking statements contained in this document as a result of new information, future events or developments or otherwise. Certain VivaGel studies are funded by U.S. NIH/NIAID/DAIDS, Contract No. HHSN266200500042C. The content of this presentation does not necessarily reflect the views or policies of the Department of Health and Human Services, nor does mention of trade names, commercial products, or organizations imply endorsement by the U.S. Government.
Investment Summary

Starpharma - a world leader in the development of dendrimer products

- **Attractive commercial partnerships in place:**
  - **VivaGel®** condom coating – simpler regulatory path than drugs
  - royalty revenues expected to commence in CY11

- **Lead product VivaGel® completing mid-stage clinical trials:**
  - Gel to protect women from sexually transmitted infections (HIV, HSV-2, HPV, bacterial vaginosis)
  - in clinical development with >US$26M NIH support

- **Dendrimers – multiple partnerships already in place:**
  - Drug delivery (Lilly, Elanco, GSK/Stiefel)
  - Medical technology (Siemens, Aldrich, Merck, Qiagen)
  - Agrochemical deal with multi-billion dollar US Co.
  - Other opportunities: Industrial, cosmetic, water treatment

---

**Starpharma Holdings Limited**

---

Starpharma is a world leader in the development of dendrimer products for pharmaceutical, life-science and other applications
“SPL is one of the few companies in Australian biotechnology sector that has what we consider to be a true technology platform which can be used for a wide range of healthcare and industrial applications.”

Shaw Stockbroking, 9 Dec 2009

“Starpharma provides excellent exposure to the biotech sector, without the development and expenditure risks attributable to late stage therapeutic players.”

Taylor Collison, 23 Mar 2010
Starpharma’s Commercial Partnerships and Partnering Strategy

**VivaGel®**
Co-development deal for Condom Coating

**Dendrimers for Drug Delivery**
Lilly, Elanco, Stiefel (now GSK); Drug delivery collaborations

**Stratus CS®**
Cardiac marker diagnostic licensed to Siemens Healthcare (Dade Behring)

**SuperFect®**
Gene transfection technology licensed to Qiagen

**Starburst®**
Dendrimers commercially available via Sigma Aldrich

**Profect®**
siRNA & DNA transfection reagents
**Starpharma’s Pharmaceutical and Life Sciences Product Pipeline**

- **Lead Products In Clinical Testing:**
  - VivaGel® – coated condom (accelerated program)
  - VivaGel®- “stand-alone” gel
    - HSV-2 prevention (genital herpes)
    - HIV prevention (AIDS)
    - Bacterial Vaginosis trial program to commence mid 2010

- **Partnered Products In The Market:**
  - Stratus CS® – Siemens Healthcare – cardiac diagnostic
  - Superfect® – Qiagen Inc. – gene transfection regents
  - Priofect® – EMD Merck – siRNA/DNA transfection reagents

- **Partnered Programs/Products In Development:**
  - Drug Delivery – Lilly, Elanco, Stiefel (GSK) and various undisclosed
  - ADME Engineering – undisclosed – protein drugs
**VivaGel® - for the Prevention of Sexually Transmitted Infections (STIs)**

**Two Products in Development**

**VivaGel®-Coated Condom**

- Early opportunity
  - Anti-viral Condom coating
  - >>A$100m (est.) license & royalties
  - Combination Product (Device Branch review)

**VivaGel®**

- Main opportunity
  - Applicator + anti-viral gel
  - In-house development, then late stage license
  - Standard Pharmaceutical

**Significance to SPL**

- Presentation
- Commercialization Strategy
- Regulatory path
VivaGel® Condom Coating License Agreement with Durex®

**Starpharma to receive:**
- royalties on SSL sales
- milestones
- development assistance

**Value to Starpharma:**
- Estimated receipts in excess of A$100m
- Nearer term revenue potential (device route)
- Enhancement of VivaGel® brand
- Commercial validation of VivaGel® and microbicides

**SSL International plc to market globally**
- Global consumer product company (LSE:SSL) Mkt. Cap GBP1.7 billion
- Major brands include Durex® and Scholl®
- Durex® is No. 1 condom brand globally
- ~40-42% of global branded condom market; aggressively building share and capacity, including Russia and China

SSL CEO Garry Watts: “innovation is key to SSL’s strategy to keep sales growing and consumers interested..”

Condoms represent a US$3.26B market; VivaGel® coating offers a premium product
VivaGel®-Coated Condom

- Early opportunity
- Anti-viral Condom Coating
- >>A$100m (est.) license & royalties
- Combination Product (Device Branch review)

Starpharma Income Scenarios

Key Assumptions:
- Global Branded Condom Market est: US$1.1 - $1.7 B
- SSL Global market Share 40 -42%
- Market Growth Rate pa. 5%
- Patent expiry 2027 (excl. extensions)

Potential upsides (not included):
- Further SSL market share growth
- Market growth > 5%
# VivaGel® - Microbicide for the Prevention of HIV and Genital Herpes

<table>
<thead>
<tr>
<th><strong>Product</strong></th>
<th>Topical vaginal microbicide</th>
</tr>
</thead>
</table>
| **Indications:** | Under development: Prevention of STIs in women  
**Phase 2 (IND): HIV, genital herpes (HSV-2) and Bacterial Vaginosis** |
| **Presentation:** | Applicator delivered Gel |
| **Active:** | Pharmaceutical grade Dendrimer (SPL7013) |
| **Mechanism:** | Dendrimer **inactivates HIV and HSV-2**  
Binds to receptors on the virus; blocks cell entry |
| **Motivation:** | Vaccines ineffective; condoms not widely used |
| **Other:** | **FDA Fast Track Status; >$26M NIH support**  
Highly active in HIV & Herpes in stringent animal models; **Potent Activity in humans to 24 hours**  
Activity in **HPV** and **bacterial vaginosis**; other pathogens under investigation; contraceptive activity in animals  
Global patent coverage to 2027 |
The Demand for a Microbicide

Barack Obama
President, USA

“Topical microbicides, therefore, represent a critical element in a comprehensive strategy to fight the HIV/AIDS pandemic. We must continue to prioritize microbicide research and development.”
March 2007

Professor David Baltimore
Nobel Prize Winner
Authority on HIV

“we are no closer to a vaccine now than we were [in 1984]”
February 2008

Bill Gates
Bill and Melinda Gates Foundation

Treatment without prevention is simply unsustainable.....

We believe that microbicides and oral prevention drugs could be the next big breakthrough in the fight against AIDS.
August 2006
Commercial Opportunity for Microbicides

**Estimated Market* for Microbicides in Developed Countries**

- **Industry surveys confirm strong consumer demand**
  - Percentage of female US college students who would buy a microbicide effective against STIs: 30 - 40%
  - Women in US who would use a microbicide: >20 million

---

* **Key assumptions:** 291m women of reproductive age (15-49) in developed countries; Unit sale price ~ US$2; Usage rates according to published data
  
  **Source:** World Bank; UNAIDs; EC AIDS survey; BCG analysis, various analyst and microbicide publications

**Independent Microbicide market estimates > $3 Billion**
VivaGel® - Bacterial Vaginosis (BV)

The Market Opportunity

- The most common vaginal infection worldwide
- 21 million women infected with BV in US, (as high as 51% in certain demographics);
- Causes unpleasant discharge, increased risk of HIV/other STIs, linked to preterm birth
- Global market for topical BV treatments: approx. US$300-350M
- Shortcomings amongst current antibiotic treatments:
  - Low cure rates < 50% and high rate of recurrence
  - Adverse effects: toxicity, reaction with alcohol, incompatibility with condoms

- VivaGel® clinical safety trials showed BV resolution in a number of human participants
- Lab tests show desirable differential action between normal flora (lactobacilli spp.) & pathogenic bacteria (G. vaginalis, Bacteroides, Prevotella.)
- VivaGel® BV clinical program to commence mid 2010
VivaGel® Clinical Development Status

- Currently in mid-stage clinical trials for HIV and Genital Herpes
- 5 Clinical Trials in >200 people
- Safe and well tolerated in humans
- Non-dilutive NIH funding >US$26m; extensive development package
- US FDA Fast Track Status
- BV trials to commence mid 2010

- Condom Coating – accelerated program (device branch)
Capabilities of Starpharma’s Technology include:

- Improved efficacy of drugs
- Extension of drug half-life
- Reduced toxicity
- Active or passive targeting (e.g. EPR*)
- Product lifecycle management
- Improved solubility of drugs
- Drug “rescue”

*enhanced permeability & retention effect

Starpharma’s Delivery Partnerships:
- Eli Lilly and Company – human pharmaceuticals
- Stiefel Labs. Inc (a GSK company) – Dermal
- Lilly’s Animal Health Division, Elanco
- Various additional, early stage
Dendrimers in Agrochemicals

• Extension of drug delivery technology
• Valuable new opportunity for dendrimers
• Agrochemicals market US$124B (Pesticides US$35.8B)
• Faster development than pharmaceuticals
• One agreement announced Nov. 2009 – a number of discussions in progress

Dendrimer can enhance the performance of existing agrochemicals

• Adhesion to difficult surfaces
• Extension of effect/
  Controlled release
• Solublising
• Protection of Actives
• Sequestration

Model demonstrating multiple points of attachment

**Value Drivers for Starpharma**

**Get VivaGel® Condom coating to market**
- Complete co-development with SSL plc
- Regulatory filings and approvals for VivaGel® coated condoms
- Commencement of royalty revenue estimated for CY11

**Advance VivaGel® through clinical development**
- Commence and complete Phase-2 Bacterial Vaginosis clinical program
- Phase-3 clinical study for Bacterial Vaginosis leading to product registration
- Complete IIa trials and advance Herpes/HPV/HIV efficacy trials

**Expand dendrimer-based commercial relationships and programs**
- Advance existing partnerships - pharmaceuticals, diagnostics, agrochemicals
- Potential sales of first agrochemical product
- Establish new, "risk-free" commercial partnerships – medical and industrial
SPL Analyst coverage and commentary

**Analyst valuations / Price targets**

- **Taylor Collison**
  - **Buy**
  - Date: 23-Mar-10
  - Share Price: $0.69
  - Broker Valuation: $1.11

- **Shaw Research**
  - **Buy**
  - Date: 01-Feb-10
  - Share Price: $0.71
  - Broker Valuation: $1.25

- **Morningstar**
  - **Buy**
  - Date: 21-Jan-10
  - Share Price: $0.66
  - Broker Valuation: $1.50

**Current Share Price**: $0.62  
**Average broker valuation**: $1.29

**Notes**:
1) As at 28 April 2010
2) Shaw acted for Starpharma in the role of Lead Manager within the past 12 months (from report date), for which they received a fee. Shaw, its associates, employees and authorised representatives have an interest in the financial products of Starpharma
3) Broker Price Targets excludes Morning Star who did not provide a price target

**Analyst commentary**

- **Taylor Collison, 23 Mar 2010**
  - "Starpharma provides excellent exposure to the biotech sector, without the development and expenditure risks attributable to late stage therapeutic players."

- **Shaw Research, 1 Feb 2009**
  - "This deal [Eli Lilly’s partnership with SPL for drug delivery] provides further validation of opportunities around SPL’s dendrimer technology and the company’s business model."

- **Bioshares, 20 Dec 2009**
  - "Any price weakness in SPL is likely to be met with keen interest by stock accumulators looking to benefit ahead of anticipated flow of revenue in 2011 from Starpharma’s condom coatings with SSL."

- **Shaw Research, 9 Dec 2009**
  - "SPL is one of the few companies in Australian biotechnology sector that has what we consider to be a true technology platform which can be used for a wide range of healthcare and industrial applications." (2)

- **Morning Star, 25 Sept 2009**
  - "A significant commercialisation deal in 2008 and the start of revenue generation now focuses investor attention."

*Condom coating: accelerated development program

+ Agrochemical deal with multi-billion dollar US Co.
+ Other opportunities: Industrial, cosmetic, water treatment
Technology Overview: Dendrimers

- **Dendrimers are a special type of polymer:**
  - Small (millionths of a millimetre)
  - Versatile
  - Highly regular size and structure
  - Synthetic
  - Well tolerated pharmaceutically

- **Starpharma’s unique dendrimer advantage:**
  - Dominant IP position
  - Unique, proprietary manufacturing process
  - First company to bring a dendrimer to the clinic (US-FDA)
  - World leading dendrimer synthesis and analysis team

- **Wide range of applications – medical & industrial:**
  - Active drugs (VivaGel®)
  - Drug delivery
  - Agrochemicals
  - Cosmetics, Research reagents
  - Materials and Coatings
  - Water remediation (US Dept. Defence funding)
Bacterial Vaginosis Clinical Development Program

**Phase 2**
- Dose ranging
  \[ N = \sim 120 \]
- Test for clinical cure after 7 days; and
- Prevention of recurrence after 3 months

**Phase 3**
- Two pivotal efficacy studies
- \[ N = \sim 200 \text{ per trial} \]
- Test for clinical cure after 7 days, and
- Prevention of recurrence after 3 months

## Activity in HPV strains not currently addressed by existing vaccines
Genital Herpes represents a major health issue:

- Recurrent, lifelong viral infection
- Affects 22% sexually active adults in the USA and 15-20% in Europe
- 40-50% of women in the U.S. by 2025 (estimated)
- Existing prevention methods have proven ineffective and developmental vaccines disappointing
- Major risk factor for HIV: 38-60%* new HIV infections in females attributable to HSV-2
- Alternative prevention options are limited
- VivaGel® is the only microbicide being developed for Herpes prevention

70% Percentage of female US college students who would buy a microbicide with STI and contraceptive properties

>20 million Women in US who would use a microbicide

Independent Microbicide market estimates > $1.5-3 Billion
VivaGel® Retention of Antiviral Activity After Vaginal Administration

**Conclusion:** Potent and sustained activity after Vaginal Administration

**Objective:**
- Assessment of antiviral (HIV, HSV-2) activity of VivaGel® in cervicovaginal fluid samples (CVS) taken immediately then 1, 3, 12, 24 hrs after separate doses

**Results:**
- CVS obtained immediately after administration of VivaGel® provided effectively complete inhibition of HIV and HSV infection *in vitro*;
- At 1 and 3 hrs following administration, initial high level of inhibition retained in 100% of women tested;
- Even at 12 and 24 hrs following administration, >90% of initial antiviral activity retained in >50% of women tested;
- Safe, well tolerated

**What it means:**
- First study demonstrating potent antiviral activity of any microbicide beyond 1 hr post admin in humans;
- Potential for product to be applied hours before intercourse and remain effective (coitally-dissociated)

Strategy for Maximising Commercial Returns from Starpharma’s Dendrimers

- Conduct proof of concept & enable partner evaluation
- Prove once, partner repeatedly

- BD goal - Sector-Leading partners

- Development funding
- Product expertise / market focus
- Existing sales force for fast market entry & roll out

Intense focus of resources on market-oriented development of platform
-> de-risked, wide application without loss of focus
Utilizing a dendrimer construct the aqueous solubility of the drug Paclitaxel was increased >9,000X.

Small Molecule Drug Delivery

Efficacy - with reduced toxicity

Mouse Tissue Deposition

Breast Cancer Xenograft

PBS control
Dendrimer control
Doxorubicin
Liposomal doxorubicin
SPL8181

Tumour Volume (mm³)

% administered dose per gram of tissue

Tumour, Liver, Heart, Kidney, Plasma
Dendrimers for Drug Delivery
Efficacy - with reduced toxicity

Cardiac toxicity of one of world’s most widely used cancer drugs (doxorubicin) reduced markedly

Drug alone: Severe Cardiac Toxicity

Drug with Dendrimer: Protected

...whilst preserving or enhancing drug function
Conjugate protein or peptide to functionalised dendrimer

**Control half life** of protein or peptide therapeutics

**Improve dosing regimen**

**Reduce protein metabolism**

*in vivo* using insulin for proof of concept *achieved*

**Status**

Co-development program with undisclosed partner

*In vivo* mouse model

Dendrimer insulin shows prolonged suppression of blood glucose *in vivo*
Portfolio: siRNA Delivery – PrioFect®

Concept: Overcome the principal obstacle to the development of RNAi-based drugs ... delivery

PrioFect®: a delivery agent for siRNA (“Transfection”)

siRNA: a means to achieve RNAi
• ...potential foundation for a whole new class of specific and potent drugs against diseases that are difficult to treat.
• ...a natural mechanism that the body uses to inhibit expression of certain genes.

Commercial opportunities for PrioFect®:
1. Research reagent market ($200 million)
   Licensed globally to EMD Biosciences*
   Agreement includes royalties, supply and milestones
   First product launched April 2008

2. Therapeutic/delivery application
   Rights retained
   Significant commercial potential for an effective delivery agent
   Opportunity for multiple deals

* EMD Biosciences, Inc. is part of Merck KGaA, a global pharmaceutical and chemical company with sales of EUR 6.3 billion in 2006.

Merck buys Sirna Therapeutics
By Bioperform Web Watch
Posted 10/31/2006 11:01:00 AM

The Associated Press reports that Merck & Co. has agreed to pay $1.1 billion to buy Sirna Therapeutics Inc. Merck’s all-cash-share offer for the San

Alnylam:
“The alliance could be valued at over 1 billion US dollars.....”

For this reason the competing ARV class of microbicide has already been banned in a number of countries, even before it has been developed.
VivaGel®: Animal Efficacy results

VivaGel®: Animal Efficacy results

**SHIV/HIV Protection (primate)**

Combined Results

Percentage of Animals Protected from SHIV Infection

- VivaCell® (5% w/w SPL7013)
- VivaCell® (3% w/w SPL7013)
- Gel Only 1
- Gel Only 2
- Unre m 1
- Unre m 2

**Herpes Protection (guinea pig)**

VivaGel®: animals protected from HSV-2

- 5% w/w SPL7013 gel
- 3% w/w SPL7013 gel
- Placebo gel
- PBS

VivaGel®: Potent Contraceptive Activity in Rabbits

- Recent study has shown that SPL7013, the active ingredient in its VivaGel®, exhibits a potent contraceptive effect in rabbits
- Independent study undertaken at Johns Hopkins University under an NIH grant
- Fertility was reduced by more than 75% by SPL7013 in a VivaGel® formulation and 95% in a HEC gel compared with an inactive gel
- If contraceptive activity is confirmed in humans it would allow for development with contraception as an additional claim
- Findings relevant to both the stand-alone gel and condom coating opportunities

VivaGel®’s active ingredient is a potent contraceptive in animals
